

## **Standard Operating Procedure**

## Determining if a Chemical is a Particularly Hazardous Substance (PHS) or a "High-Risk" Chemical

| Document#:CHE024.01                               | Distribution: External    |
|---|---------------------------|
| Section: Chemical Safety-Chemical Hygiene Program | Effective Date: 1/01/2022 |
| TotalPages: 2                                     | Revision Date:            |

The Occupational Safety and Health Administration's (OSHA) Hazardous Chemicals in Laboratories Standard (29 CFR 1910.1450) defined particularly hazardous substances (PHS) as including select carcinogens, reproductive toxins and substances which have a high degree of acute toxicity. Temple University also considers some reactive materials to be particularly hazardous and has identified some extremely hazardous chemicals as "High-Risk"

Laboratories must maintain an accurate and up-to-date inventory of particularly hazardous substances and "High-Risk" chemicals in Chemical Environmental Management System (CEMS), the University's campus-wide chemical tracking system. In addition, a lab-customized SOP must be prepared and implemented for all PHS and/or high-risk chemicals. The use of "High-Risk" chemicals requires PI approval and PI-approved Standard Operating Procedure (SOP).

## DETERMINATION

Laboratories at Temple University should evaluate GHS-compliant Safety Data Sheets (SDS) and other chemical information and should treat chemicals as particularly hazardous if they have one or more hazard classifications indicated below. If the chemical has a hazard classification shown in red, it is also considered "high-risk".

| Criteria for Particularly Hazardous Chemicals        |  |  |
|--|--|--|
| Based on GHS* Labeling-found in Section 2 of the SDS |  |  |
| Select   | <ul> <li><u>GHS</u>*-Carcinogenicity Category 1A of 1B</li> </ul>    |  |
| Carcinogens  | • IARC** Group 1   |  |
|  | <ul> <li><u>NTP's*** "'Known to be Human Carcinogens"</u></li> </ul> |  |
|  | OSHA-listed carcinogens  |  |
|  | GHS Category 2 and IARC Group 2 (A or B), And NTP "Reasonably        |  |
|  | Anticipated to be Human Carcinogens"                                 |  |

| Reproductive                | GHS Category 1A or 1B for reproductive toxicity                       |
|-----------------------------|---|
| Toxins                      |   |
| Chemicals                   | • Acute toxicity by inhalation or dermal exposure GHS-Category 1 or 2 |
| Having High                 | <ul> <li>Acute toxicity by oral exposure GHS category 1</li> </ul>    |
| Acute Toxicity              | • Specific Target Organ Toxicity-Single Exposure GHS category 1       |
|                             | Skin or Respiratory Sensitizer-Category 1A                            |
|                             | Strong Hydrogen Fluoride releaser                                     |
|                             | Corrosive to the respiratory tract                                    |
| Reactive &                  | In contact with water liberates toxic gas                             |
| Explosive                   | Reacts violently with water   |
| Chemical                    | Pyrophoric liquid or solid-Category 1, or Pyrophoric Gas              |
| Considered                  | • Explosives-Unstable or Divisions 1.11.3                             |
| Particularly                | • Explosives when dry, or Explosives with or without air contact      |
| Hazardous <mark>(and</mark> | Self-reactive or Organic Peroxides-Type A                             |
| High-Risk)                  | Self-heating Category 1   |
|                             | Oxidizing liquid or solid GHS category 1                              |
|                             | • In contact with water releases flammable gas GHS category 1 or 2    |
|                             | <ul> <li>In contact with acids liberates toxic gas</li> </ul>         |
|                             | Pyrophoric liquid or solid GHS category 1                             |
|                             | Self-reactive or organic peroxides-Type B                             |
